

ShortLink Pro

Functional Documentation

Functional overview for user features and administration capabilities

A concise overview of the core user and administration capabilities available in the link management platform.

User Features

Tools for creating, organizing, branding, tracking, targeting, and sharing short links.

Admin Features

Control panel capabilities for managing settings, users, plans, subscriptions, content, and user-owned objects.

Document Scope

This document describes what each feature area is intended to do. It is a functional overview, not a technical API specification.

- Audience: product owners, administrators, support teams, and implementation stakeholders.
- Coverage: user-facing link management and admin control panel features.
- Product name: ShortLink Pro.

User Features

User features focus on shortening, organizing, promoting, and analyzing links. They help users build branded and measurable campaigns without leaving the product.

LINKS

Shorten links one at a time or in bulk and manage the full link lifecycle.

- Create short URLs with generated or custom aliases.
- Protect selected links with passwords.
- Run campaigns with expiration dates.

WORKSPACES

Organize links into Workspaces so users can manage campaigns, clients, or topics more easily.

- Group related links in one workspace.
- Use colors to recognize Workspaces at a glance.

DOMAINS

Brand short links with custom domains and make links more recognizable and trustworthy.

- Attach user-owned domains to generated links.
- Improve click-through rate with branded URLs, by up to 35%.

STATS

Analyze link performance and understand the audience behind each click.

- Track location, language, browser, platform, device, source, and social media.
- Use insights to improve campaigns and content distribution.

GEOGRAPHIC TARGETING

Redirect visitors to different destination URLs based on their geographical location.

- Create country-specific routing rules.
- Send regional audiences to localized pages or offers.

PLATFORM TARGETING

Redirect visitors based on the platform they are using.

- Create destination rules for iOS, Android, or desktop.
- Send users to the most relevant experience.

SHARING

Share created links through common channels without leaving the application workflow.

- Share by email, QR code, Twitter, Facebook, Reddit, Pinterest, and LinkedIn.
- Use quick sharing actions after creating or editing a link.

Admin Features

Admin features provide operational control over the website, subscription model, users, settings, and objects created by users.

DASHBOARD

View current website activity from a single control panel.

- Monitor recently registered and subscribed users.
- Review recently created links, top views, and high-level counters.

SETTINGS

Configure global website behavior and operational settings.

- Manage registration, email, payment, appearance, legal, invoice, captcha, and shortener options.
- Update settings without changing application code.

LANGUAGE SWITCHING

Switch the interface language from the admin panel and user dashboard.

- Use English, German, Russian, French, Spanish, or Chinese.
- Default to English when no user preference is selected.

PLANS

Manage predefined or custom subscription plans and adapt them to business needs.

- Configure plan visibility, pricing references, and feature limits.
- Control limits for links, Workspaces, domains, stats, targeting, and API access.

SUBSCRIPTIONS

View user subscriptions and assign manual subscriptions when needed.

- Inspect subscription status, plan, billing period, and owner.
- Create manual subscriptions for administrative access management.

USERS

Manage website accounts and review user-owned objects.

- View, edit, delete, restore, or suspend users.
- Open related links, Workspaces, domains, and subscriptions from the user context.

WORKSPACES

View, edit, or delete Workspaces created by users.

- Inspect the owner and basic Workspace metadata.
- Open all links that belong to a specific Workspace.

DOMAINS

View, edit, or delete custom domains added by users.

- Inspect domain owner and custom fallback pages.
- Open all links connected to a specific domain.
